FOP CPOUP,

asthma, bronchitis, or whooping cough, there is no remedy so sure and safe as Dr. Ayer's Cherry Pectoral. From the first dose its healing influence is manifest. The sufferer who has been kept awake by the cough falls into a restful sleep, and awakes strong and refreshed. Dr. Ayer's Cherry Pectoral is acknowledged to be a specific for all pulmonary complaints. Physicians praise and prescribe it.

It is now put up in half size bottles at half price, 50c.

"One of my children had.croup. One night I was startled by the child's hard breathing, and on going to it found it strangling. It had nearly ceased to breath. Having a part of a bottle of Ayer's Cherry Pectoral in the house, I gave the child three doses at short intervals, and anxiously waited results. From the moment the Pectoral was given the child's breathing grew easier, and in a short time it was sleeping quietly and breathing naturally. The child is alive and well to-day. Ayer's Cherry Pectoral saved its life."—C. J. WOOLDRIGE, Worthen, Texas.

PREHISTORIC

Mr. William H. Ballou writes in the Century Magazine of "Strange Crea-

tures of the Past," basing his descriptions with the accompanying illustra-

of the Rocky Mountains and other re-

gions of the United States. These in-

animals that have ever inhabited the

earth, few of them being less than 25

reaching 80, often with a correspond-

The fin-back lizard was one of the

found in Texas. The skeletons so far

found range from three to ten feet in

length. It bears the name of Dimet-

spines are often found in masses in the

rocks, adhering together like sticks.

In a related genus, Naosaurus claviger,

these spines had branches, giving them

the appearance of the yard-arms of

ships, from which may have been ex-

tended membranes enabling these an-

imals to sail along the surface of the

water. Owing to the great number

of spines, it may be assumed that this

animal never rolled on the ground like

a horse. The finbacks and spinebacks

were flesh eaters. Their teeth were

formidable, being finely serrate ming-

led with huge conic tusks. Large spines

sprang from the vertebrae, and were

often as long as forty inches and form-

ed an elevated fin for defence against

some enemy not yet known. The limbs

were not long enough, nor the claws

sufficiently acute, for tree-climbing.

The dimetrodons were both water and

land animals, being able to walk on

ing height and a weight of tons.

MONSTERS

Could we suppose An examination of the beds at this point shows first the remains of a shalcluded the largest and most terrible Rocky Mountain borders supplied an low salt water sea known as the Dakota formation, in which have been found fossil leaves and sharks' teeth. Underneath the Dakota lies the Jurassic, a lake bed from which we have many monsters-megalosaurs or great carnivorous as well as herbivorous dinosaurs of diverse species. The amphibious dinosaur was undoubtedly omnivorous. It seized whatever came one-half successive sets. In order to within its reach, whether fish, flesh, or vegetation. Its teeth were spoonshaped at the crown. It had ambula tory limbs. Its neck and back verte brae were hollow and probably con nected by air tubes with the lungs to give it buoyancy at the right point. Its tail vertebrae and thigh bones were solid and of great weight, allowing it to anchor on the lake bottom. One of its petrified leg bones is six feet four inches in length, and weighs about \$00 pounds. The weight of the entire animal might have been three or four tons. It probably never came wholly out of water. Had it done so, the great weight of its structure might have caused a collapse. The water was its safeguard, for its surrounding weight held its gigantic frame togeth-There is no evidence that it was web-footed. Its great posterior skele-

PREHISTORIC MONSTERS-THE LEAPING DINOSAURS. [Laelaps aquilunquis (Cope), about 20 feet in length, from the Cretaceous of New Jeersey. Its long hind legs enabled it to escape armored crocodiles and to capture the herbivorous Hadrosaurus Foulkii.]

er of flesh, fish or vegetation; his Cope in 1866, in the Cretaceous green limbs suggest whether he walked, sands of New Jersey, (See illustra-It had a relative in the far west tions. ing to note the diversity of powers which also did some leaping, and Is known as Laclaps incrassatus (Cope). These leaping dinosaurs were carnivorous or flesh-eating animals. It would appear that among their victims were the type of lizards just described as hadrosaurs, and that they also attacked each other. Thus the western laelaps preyed on the western Hadrosaurus mirabilis, and the eastern laelaps preyed on the eastern Hadrosaurus Laclans, in taking long feaps, struck

ts prey with the hind legs. The fore limbs, being small, must have been less efficient as weapons in attacks on such creatures as the hadrosaurs. So far as is known, there were but few animals then living which could withstand a long pursuit on land, except in case of certain lizards. Laelaps had to contend with hard-shelled turtles, armored crocodiles and swift sea-saurians. These it must have captured by sudden movements, as it is not likely that its grasping toes furnished much if any, swimming power. The lightness and hollowness of the long bones of the hind legs of laclaps, and their flexture, are together appropriate to great powers of leaping. The tail was moderately long, rounded and strong and not so much of a support as a resource for striking a blow, and for throwing an enemy within reach of the kick or grab of the terrible hind legs. As a kicker Laclaps stands unrivalled among animals. In this respect it ex-Dinosauria were terrestrial, and the ceeded the foot blow of the ostrich structural adaptations necessary for

which can easily kill a man. A huge dinosaur from the Laramiformation was the horned agathaumas. Its ponderous horned skull suggests the appearance of a rhinoceros, and its high curved back and bulk an elephant. No animal known had a more powerful armature upon its skull than this creature. In front was a knifelike beak, on the head a pair of large pointed horns, and on the back of the

head a row of sharp projections, This skull, armored with horns and beak, in shape like a wedge, was supported by massive bones, making formidable weapon for offense and defense. Of all the later dinosaurs, this

dinosaur found by Professor ton enabled it to stand firmly on the bottom, seize a passing fish, feed on the plant life at the bottom, raise its head to a great height, stand on its hind feet and tail, and browse on the

overhanging branches. A saurian in

structure, it was everything in habits.

It swept the territory in which

moved of animal and vegetable life. Of

the wonderful fauna of the Jurassic

it was one of the tallest, of hugest di-

mensions, of the greatest mass in pro-

portion to height. The giant dinosaur would be an appropriate name for another reptile-the camarasaur. The Amphicaelius altus, just described, was amphibious in the sense that it fed upon everything it could reach and capture, in or out of water, while wading. The type now to be described was similar in appearance in many respects, except that it waded or swam in the water indifferently. This type was purely herbivorous, and its great bulk suggests that it required at least an acre of plants, grass, and leaves to satisfy its appetite for a meal Wives Wanted In Idaho Young women are still scarce in Idano, and bachelors who desire to change their conditions of single blessedness are plenty. As a result of this condition of affairs school boards in tha state have difficulty in securing teachers to conduct their schools. Few men are engaged in the occupation of teach-

ing the young, as they can usually find more lucrative employment. So young women are imported from the east, and as soon as they begin their work the onohelors begin paying court to them With a dozen men fluttering around ner, small wonder that the schoolma'm resigns and marries one of her suitors. There are about ten unmarried men to one unmarried woman in Idaho. Dr. William C. Whitwell, a druggist one unmarried woman in Idaho gives the following incident as a sam ple of the way schoolma'ams are wooed and won in Idaho: "A charming young lady, Miss Busch, came from Iowa to teach in the public schools of Givensville," he says, "but before she was there three months she was engaged to a prominent man of the town, and at the close of the school term they were married. Her sister came to teach the next school year. When the term was half over this sister resigned and married, and sent for another unmarried sister to take her place as teacher. The third Miss Busch taught in the school the latter half of the term, but three days after the term closed she was married to a business man of the town,

CURE YOURSELF!

TRYING ORDEALS FOR WOMEN.

Mrs. Pinkham Tells How Women May Avoid Painful Examinations.

To a modest, sensitive, highstrung young woman, especially an unmarried woman, there is no more trying or painful ordeal than the "examinations," which are now so common in hospitals and private practice.

An examination by speculum. or otherwise, is sometimes a positive necessity in certain stages of & many diseases peculiar to women, so at least it is declared by the pr fession. This would not be the case if patients heeded their symptoms in time

If a young girl's blood is watery, her skin pale and waxy looking, her lips colorless, bowels torpid, digestion poor, her cars and temples throb and she is subject to headache, begin at once to build up her system with Lydia E. Pinkham's Vegetable Compound.

Do not allow her to undergo a physical examination. Here is a letter from a young lady who requests that her name should not be used, but gives her initials and street number so that any inquiry addressed to her will be received. She says:

"Dear Mrs. Pinkham:-It affords me great pleasure to be able to say a few words in regard to the merits of your Vegetable Compound. I was tempted to try it after seeing the effects of it upon my mother, and now I feel like a new person. I am a stenographer and was troubled with falling of the womb and female weakness in general. I continued to work until I was so weak I could no longer walk, and the last day I was forced to stop and rest. "I was then so ill that I was compelled to stay in bed and so nervous that I could not hold anything in my hands. The least noise or surprise would cause my heart to beat so loudly, and I would become so weak that I could hardly stand. I suffered for almost a year. It is different now. I can go about my work with pleasure, while before, work was a drudge.

"Trusting that my words of praise may help some other afflicted person, and be of benefit to womankind in general, I remain, Yours in gratitude. I. H., 444 S. East St., Indianapolis, Ind."
